White Frost (Ice)

Thickness:

5/16" (8MM)

Material:

Polycarbonate
Multi-Wall

Twin Wall Polycarbonate Multi-Wall Sheet

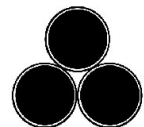

5/16" (8mm) Ice White Twin Wall Sheet is commonly used in elevators because of its flame retardant properties and its lightweight structure.

The soft white low glare lighting is an excellent choice for the small confined area of elevator cars.

Twin Wall sheet is protected by a coating on one side to shield the polycarbonate material from discoloring caused by Ultra Violet Rays from the lamp source.

Twin Wall is available cut to size, or can be cut on site using a standard box knife or with a power saw with a standard circular, jig or table saw with a circular blade having 8-12 teeth (fine tooth blade).

Twin Wall Sheet is available in sizes up to 48" x 144" allowing excellent yield for commonly oversize panels found in elevator cars.
